Are you a home user or a small business that wants to activate Microsoft Office 2013? You can activate it on up to five computers, but if you're installing Windows 8, 8.1, or 10 on your computer and installation asks for a product key, there's only one way you'll be able to enter the product key. The following article will show you how to enter the product key using Microsoft KMS Activator. This will only work if you have Windows 7, Windows 8.1 or Windows 10 installed. If you plan to install Windows 8, 8.1 or 10 on your computer, I highly recommend that you download and run this on a clean installation prior to your first sign-in. You will need a few things: A computer running one of the above mentioned operating systems and an Internet connection for this application to communicate with Microsoft Activation Servers over the internet. If you have a computer running one of the above mentioned operating systems, simply launch the application and follow the on screen instructions. If you have more than one computer that needs to be activated, simply add them all by clicking on "Add Computers..." from the menu on the left side. Afterwards, keep in mind that Microsoft KMS Activator will only activate one of your computers at a time. If you want to activate all of your computers at once, simply exit the application and repeat adding each computer again. Microsoft KMS Activator is included in the Microsoft KMS Toolkit.
